DATE MAILED: 03/02/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/670,524

Applicant(s)

SAKIYAMA ET AL.

Examiner

Felix O. Figueroa

Art Unit

2833

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 January 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 03 January 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Drawings

Figure 10 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Please note that each figure should have its own independent prior art label in order to avoid confusion.

Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 7, 8, 10, 11, 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guss, III (US 5,062,807) in view of Fuchs et al. (US 6,652,293).

Guss discloses a connecting structure for auxiliary machinery and a cable (18) in which conductors (L1-L3) are surrounded by an insulating covering; and an auxiliary machinery (10) attached directly to this the cable the auxiliary machinery comprising: a

housing (11) comprising a board (15) on which electronic components (26,28) are mounted and to which a specific circuitry pattern has been formed; a connection terminal (23) connected to the circuitry pattern on the board and to at least one conductor among the conductors of the cable, and extending in a first direction (see following figure) there-between; and a molded part (16) for sealing a connection between the connection terminal of the housing and the at least one conductor of the cable, the molded part located near the connection in the first direction, wherein a first portion of the cable extends along an outer side of the auxiliary machinery.

FIG. 7

Guss discloses substantially the claimed invention except for flat configuration of the conductors. Fuchs teaches the use of conductors arrayed in a flat configuration. This flat configuration permits a reduction of the size/profile of the connecting structure. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to form the conductor of Guss in a flat configuration, as taught by Fuchs, to reduce the size/profile of the connecting structure.

Regarding claim 3, Guss discloses a waterproofing structure for an auxiliary machinery (10) that is directly connected to a cable (18) in which conductors (L1-L3) are

Art Unit: 2833

surrounded by an insulating covering; the auxiliary machinery comprising: a housing (11) comprising a board (16) on which electronic components (26,28) are mounted and to which a specific circuitry pattern has been formed; a connection terminal (23) connected to the circuitry pattern on the board and to at least one conductor among the conductors of the cable, and extending in a first direction there-between; and a molded part (16) for sealing a connection between the connection terminal of the housing and the at least one conductor of the cable, the molded part located near the connection in the first direction.

Guss discloses substantially the claimed invention except for flat configuration of the conductors. Fuchs teaches the use of conductors arrayed in a flat configuration. This flat configuration permits a reduction of the size/profile of the connecting structure. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to form the conductor of Guss in a flat configuration, as taught by Fuchs, to reduce the size/profile of the connecting structure.

Regarding claims 7 and 8, Guss discloses the molded part being molded over the connection between the terminal and the conductor. The examiner notes that the claim describes a process of manufacturing (i.e. "secondarily molded"... "after the connection is completed") which is incidental to the claim apparatus. It is well established that a claimed apparatus cannot be distinguished over the prior art by a process limitation. Consequently, absent a showing of an unobvious difference between the claim product and the prior art, the subject by process claim limitation is afforded little patentable weight (see MPEP 2113).

Regarding claims 10 and 11, Guss discloses tow molded parts (16,19) provided at both ends of the connection terminal in the first direction.

Regarding claims 13 and 14, Guss discloses the housing comprising a large first portion that contains the board; and a smaller second portion extending orthogonally from the large first portion, and wherein the cable is attached to the housing at a distal end of the smaller second portion.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Guss and Fuchs, as applied to claim 1 above and further in view of Boyle (US 5,620,333).

Guss, as modified, discloses the auxiliary machinery being coupled to an end of the cable at a first end portion (near top of Fig.7) of the housing of the auxiliary machinery, the at least one conductors being connected to a proximal end portion (27) of the connecting terminal along the first direction that is perpendicular to axes of the conductors. Guss discloses substantially the claimed invention except for the cable laying along the outside of the housing. Boyle teaches a connector having a cable (12) installed so as to extend along the outside of the housing (16,18) over a specific

distance from a first end (top-right side of Fig.1) to a second portion (near bottom of Fig.1) of the housing, and at the second portion the axes of the conductors bend in a direction perpendicular to the side of the housing (near the bottom of Fig.1) to provide strain relief to the cable connection. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to place the cable of Fuchs laying along the outside of the housing, as taught by Boyle, to provide strain relief to the cable connection.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Guss, III and Fuchs et al., and further in view of Arnett (US 5,238,426).

Fuchs discloses substantially the claimed invention (see discussion on claims 1 and 3) except for the receiving member and the retainer. Arnett teaches a mounting structure for an auxiliary machinery / connector (60) directly coupled to a plurality of conductors (not labeled), mounted to a receiving member (22) with a mounting hole (24); wherein the distal end (right of 60 on Fig.2) of the housing can engage the mounting hole; and a retainer (30) that attaches to the distal end of the housing and an outer periphery (at 32) of which engages in the mounting hole of the receiving member; wherein the auxiliary machinery is mounted to the receiving member by attaching the retainer in the mounting hole from one side of the receiving member (right side), and attaching the housing to the retainer from the other side of the receiving member (left side) to securely mount the auxiliary machinery onto a predetermined usage/working location (see abstract lines 22-26). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to mount the auxiliary

Art Unit: 2833

machinery of Fuchs on a receiving member, as taught by Arnett, to securely mount the auxiliary machinery onto a predetermined usage/working location.

Claims 5, 6, 9, 12 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guss, Fuchs and Arnett, as applied to claim 4 and further in view of Archer (US 5,125,852).

Arnett teaches the retainer being provided with abutting portions (34) for interlocking with a periphery of the mounting hole from a side opposed to a side in which side housing is attached, a projecting part (44) for interlocking with a periphery of the mounting hole from the side in which the housing is attached, and an interlocking projection (at 58) that interlocks with the housing. However, Arnett does not disclose the abutting portions being a collar. Archer discloses an abutting portion (see following figure) in the form of a collar. This arrangement provides a better and more stable assembly between the retainer and the receiving member (20). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to form the abutting members of Arnett in the form of a collar, as taught by Archer, in order to provide a better and more stable assembly with the receiving member.

Regarding claim 6, Arnett teaches the retainer is provided with abutting portions (34) for interlocking with the periphery of the mounting hole from a side opposed to a side in which the housing is attached and an interlocking projection (at 58) that interlocks with the housing, and the auxiliary machinery be mounted and firmly fixed to the receiving member. See discussion on claim 5 regarding the use of a collar instead of abutting projections. Arnett also discloses one periphery of the mounting hole being held by the collar / abutting portions. Arnett, as modified, discloses substantially the claimed invention except for the other periphery of the mounting hole being held by housing. Archer discloses the peripheries of the mounting hole are held between the collar and a distal end of the housing after it has been mounted in the retainer. This arrangement provides a more stable engagement between the housing and the receiving member. It would have been obvious to one of ordinary skill in the art at the time the invention was made form the housing of abutting a periphery of the receiving hole, so that the peripheries of the mounting holed are held between the collar and the housing, as taught by Archer, in order to provide a more stable engagement between the housing and the receiving member.

Regarding claim 9, Guss, as modified, discloses the molded part being molded over the connection between the terminal and the conductor. The examiner notes that the claim describes a process of manufacturing (i.e. "secondarily molded"... "after the connection is completed") which is incidental to the claim apparatus. It is well established that a claimed apparatus cannot be distinguished over the prior art by a process limitation. Consequently, absent a showing of an unobvious difference

between the claim product and the prior art, the subject by process claim limitation is afforded little patentable weight (see MPEP 2113).

Regarding claim 12, Guss discloses tow molded parts (16,19) provided at both ends of the connection terminal in the first direction.

Regarding claim 15, Guss discloses the housing comprising a large first portion that contains the board; and a smaller second portion extending orthogonally from the large first portion, and wherein the cable is attached to the housing at a distal end of the smaller second portion.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new grounds of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2833

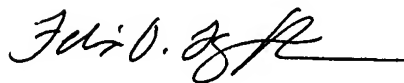

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Felix O. Figueroa whose telephone number is (571) 272-2003. The examiner can normally be reached on Mon.-Fri., 10:00am-6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on (571) 272-2800 Ext. 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
